**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): A thermotunneling device comprising a collector electrode and an emitter electrode, said collector electrode having a surface facing said emitter electrode, characterized in that an insulator layer covers said surface of said collector electrode and is separated from said emitter electrode by a distance  $d_1$ , wherein  $d_1$  is greater than zero.

Claim 2 (original): The thermotunneling device of claim 1 in which the insulator layer comprises a metal oxide.

Claim 3 (original): The thermotunneling device of claim 2 in which the metal oxide is aluminum oxide.

Claim 4 (currently amended): The thermotunneling device of claim 1 in which a[[the]] distance between [[the]]said emitter electrode[[s]] and said collector electrode is in the range of 10 - 200Å.

Claim 5 (currently amended): The thermotunneling device of claim 1 in which [[the]]  $d_1$  distance between the emitter and the insulator layer is in the range of 5 - 50Å.

Claim 6 (original): The thermotunneling device of claim 1 in which the emitter electrode comprises a metal.

Claim 7 (original): The thermotunneling device of claim 1 in which the collector electrode comprises a metal.

Claim 8 (currently amended): A method for enhancing electron tunneling between an emitter and collector electrode, said collector electrode having a surface facing said emitter electrode, comprising the step of covering said surface of said collector electrode with an insulator wherein said insulator is separated from said emitter electrode by a distance  $d_1$ , wherein  $d_1$  is greater than zero.

Claim 9 (original): The method of claim 8 in which the insulator layer comprises a metal oxide.

Application Number 10/534,633  
Amendment dated December 19, 2006  
Response to Advisory action of December 1, 2006

Claim 10 (original): The method of claim 9 in which the metal oxide is aluminum oxide.

Claim 11 (currently amended): The method of claim 8 in which said ~~covering~~placing step comprises placing the insulator between 5 and 50Å from the emitter electrode

Claim 12 (original): The method of claim 8 additionally comprising the step of placing the collector electrode between 10 and 200Å from the emitter electrode.

Claim 13 (original): The method of claim 8 in which the emitter electrode comprises a metal.

Claim 14 (original): The method of claim 8 in which the collector electrode comprises a metal.

Claim 15 (currently amended): A method for cooling comprising the steps:

- (a) applying a bias voltage to an emitter electrode;
- (b) placing a collector electrode a distance  $d_0$  from the emitter electrode; and
- (c) placing an insulator layer in contact with the collector electrode and a distance  $d_1$  from the emitter electrode, wherein  $d_1$  is greater than zero; ~~and~~
- (d) ~~contacting the insulator layer and the collector layer,~~

whereby electrons tunneling from the emitter electrode to the collector electrode ~~and the emitter electrode~~ thereby cooling the emitter electrode.

Claim 16 (original): The method of claim 15 in which  $d_0$  is in the range of 10 - 200Å.

Claim 17 (original): The method of claim 15 in which  $d_1$  is in the range of 5 - 50Å.

Claim 18 (original): The method of claim 15 in which the insulator layer comprises a metal oxide.

Claim 19 (original): The method of claim 18 in which the metal oxide is aluminum oxide.

Claim 20 (original): The method of claim 15 in which the emitter electrode comprises a metal.

Claim 21 (original): The method of claim 15 in which the collector electrode comprises a metal.
